

## Notes on re-skinning the SW1500

As with the previous Kits, this locomotive has been designed with re-skinning in mind and assumes that the user has some knowledge of s, ace and eng file editing and the use of layers in graphics manipulation.

In the upgrading of this kit I must give much credit to David Carleton who helped me with suggestions and corrections to the loco shapes.

The Kit contains the shape and graphics for an EMD SW1500

Variations:-

AAR trucks, Body mounted handrails Ditch lights, No ditch lights

AAR trucks, Frame mounted handrails Ditch lights, No ditch lights

Flexicoil trucks, Body mounted handrails Ditch lights, No ditch lights

Flexicoil trucks, Frame mounted handrails Ditch lights, No ditch lights

I have chosen the fictitious FLC colours to, a) illustrate how lines show and where the need to be painted, and b) to give any users of Rich Garber's Canton route more motive power

### CAB VIEWS

These have been specially prepared by Dwight Mitchell specially for this series of kits. They are his intellectual property. **They must not be altered or used commercially without his permission.**

Any repaints of this kit which include these cab files must include credit to Dwight for his work in the Readme file.

deweymitch@aol.com

This model is NOT to be used for any commercial purpose without my agreement.

You can re-skin for your personal use as much as you like, but before posting your work on the web please wait for my permission. To do this send me your edited ace files for inspection. I am not a hard man to please, but I do like to see how others interpret my work before I give it my approval for the world to see it !!!! Any constructive observations will be appreciated.

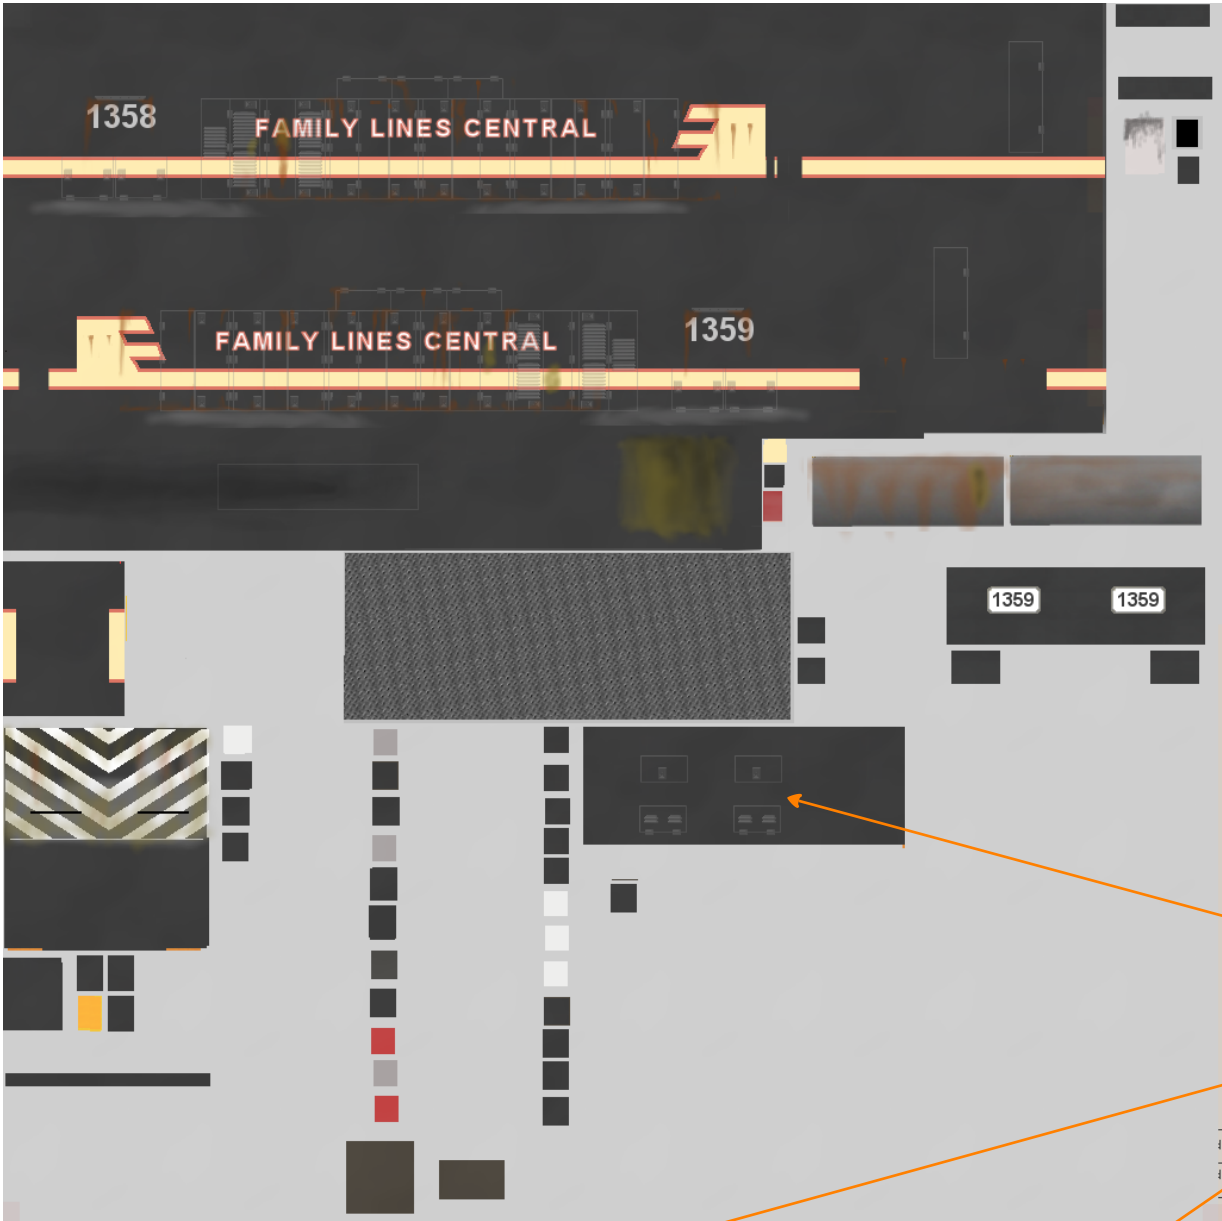

I would also appreciate being credited for my part of your project in your readme file

Brit Kit #13

The shape files, mapping and ace files for this kit have been completely updated. There are now only three graphics files. Save the -01 file in bmp format before converting to ace and the -02 and -03 as tga as these holds all the masking.

SW1500-01.bmp

SW1500a-03.tga

SW1500f-03.tga

SW1500-02.tga
