Installation

These scenarios are packaged in the same ".rwp" file. Install it through the Train Simulator 2017 package manager. These scenarios were created on the version 3 of the route. They may not work with previous route versions.

Important notes

1) TTB BR294 upgrade pack

If you are using the TTB BR294 pack, you will not be able to start the engine of the BR294 repaints available on rail-sim.de if you don't upgrade their .bin file with the ones available from dw-agency's website (http://www.dw-agency.de/downloads/sound_ttb/freeware/).

2) Route upgrade

Two faulty signals (or PZB magnets) are causing the PZB system to misbehave in some rolling stock. This has been fixed in the new tracks.bin file which is included in this package. Before do a copy of the original file and simply drag the new one to your directory:

`\Steam\SteamApps\Common\Railworks\Content\Route\bed6d539-8233-461a-b712-0d4d9f103e4f`

3) vR BR143 EL Destinations boards

To have the BR 143 correctly showing the destination boards in these scenarios, you have to set the ZZA Manager as follows:

- Position 8: 16 - Altenburg
- Position 9: 16 - Köblitz
- Position 10: 16 - Bad Rinckenburg
- Position 11: 16 - Wildau

You can find this file here: `C:\(MyHD)\Steam\SteamApps\common\railworks\Assets\VirtualRailroads\vR_ZZA_Manager\vR-ZZA-1.`
